Microsoft 365 Tenant Audit & Telemetry Report

A comprehensive assessment of license allocations, workload adoption patterns, security configurations, and workflow automation.

Tenant Name / ID: d67bbddc-c04e-467c-8722-2ef812ff55e7

Report Generated: August 24, 2026 at 05:13 PM

Assessment Status: ■ Audit Completed Successfully

Report Context: Usage & Adoption Inventory

1. Microsoft Entra Suite (Identity, Access & Network Security)

Focus: Governance of the cloud directory footprint, user/application lifecycles, single sign-on parameters, and zero-trust authentication and network perimeters.

1.1. Organization Details

Contains core tenant property variables (tenantType: AAD), sync status attributes, and base provisioned operational plans.

No organization configuration details were available.

1.2. Domains

Evaluates internet-facing domain scopes associated with the tenant and maps authentication routing models (Managed vs. Federated).

No domains discovered in directory scope.

1.3. User Creation/Deletion Logs

Audits raw activity events tracking user directory provisioning adjustments initiated by management services.

No user creation or deletion audit logs discovered.

1.4. Provisioning Logs

Evaluates directory identity synchronization mechanisms and external source-of-truth status indicators.

No provisioning audit logs discovered.

1.5. Groups & Users

Tracks total enabled/disabled object accounts, guest profile totals, and directory classification buckets (Unified M365 Groups vs. Static Security Groups).

Category	Count
Total Users	0
Enabled Users	0
Disabled Users	0
Member Users	0

Guest Users	0
Total Groups	0
Microsoft 365 Groups (Unified)	0
Security Groups (Static, non-mail-enabled)	0
Mail-enabled Security Groups	0
Distribution Groups	0
Dynamic Groups (Dynamic Membership)	0

1.6. Microsoft Entra Data App Sign Ins

Identifies backend service application access frequencies, logging connection milestones for tools like Azure Portal and Graph Explorer.

No Azure AD application sign-in logs were discovered or permission restricted.

1.7. Microsoft Entra Data App Registrations

Catalogs tenant-registered application configurations, recording unique application IDs, created dates, and credential properties (secrets/certs).

No Azure AD app registrations were discovered or permission restricted.

1.8. Microsoft Entra Data User Sign-Ins

Mangles raw user access properties, pinpointing target app display names, unique operating systems, and browser version sets.

No successful user sign-in logs were discovered or permission restricted.

1.9. Microsoft Entra Data Authentication Methods

Monitors success velocity counts over 7-day intervals across baseline access mechanisms (Password, SMS, OTP).

No authentication methods logs were discovered or permission restricted.

1.10. Filtering Policies (Global Secure Access)

Manages internet edge routing defenses, tracking proxy behavior constraints for web access within Microsoft's SSE architecture.

No Global Secure Access filtering policies configured or permission restricted.

1.11. Conditional Access (Network Exclusions & Scope)

Tracks preview rules, target cloud apps, security info enrollment boundaries, and default network exclusions.

No Conditional Access policies configured or permission restricted.

1.12. Enterprise SAML SSO Apps

Evaluates third-party federated applications configured inside the tenant utilizing standard token-based single sign-on properties.

No SAML SSO applications discovered.

1.13. Conditional Access Policies

Houses the master policy framework rules requiring multi-factor authentication (MFA) or MDM compliance checks to unlock cloud assets.

No conditional access policies discovered.

2. Microsoft 365 Core Services & Adoption (Modern Workplace)

Focus: Licensing commercial values, operational workspace utilization metrics, storage asset sizes, and productivity application adoption trends across foundational services (Exchange, SharePoint, OneDrive, and Teams).

2.1. Subscribed SKUs

Outlines active service license assignments (e.g., SPE_E5, Copilot, Teams Rooms) and compares enabled counts against actual consumed seats.

No subscribed licensing data was discovered or available for this report.

2.2. Active Users Usage

Compiles service adoption velocity logs across core application workloads over 30, 90, and 180-day operational windows.

No active user usage report data was available.

2.3. O365 30-Day Active User Trend

Maps visual timeline trends displaying consecutive user interaction curves across cloud workspace software platforms.

No active user trend data was available to generate chart.

2.4. Microsoft 365 Client Applications Usage (180 Days)

Breaks down distinct end-user service access endpoints by hardware operating systems (Windows, Mac, Web, Mobile).

No client application telemetry data was available.

2.5. Exchange Online Mailbox & Resource Configurations

Measures mailbox capacity values, overall sizes, total email counts, shared mailboxes, public folder parameters, and calendar resource pool reservations.

Metric / Telemetry Property	Exchange Mailbox Value
Total Mailboxes Analyzed	0 Mailboxes
Total Size of All Mailboxes	0.00 Bytes
Average Mailbox Size	0.00 Bytes
Total Emails Volume	0 Emails

Average Emails per Mailbox	0 Emails
Shared Mailboxes Count	Error/Unavailable
Total Shared Mailbox Size	Error/Unavailable
Public Folders Count	Error/Unavailable
Mail-enabled Public Folders Count	Error/Unavailable
Total Public Folder Size	Error/Unavailable
Room & Resource Reservation Enabled	None
Calendar Resource Pools (Rooms/Devices)	None found
Calendar Attachment Link Permissions	None

2.6. Integrated Apps

Audits organization-wide mailbox applications and productivity extensions (e.g., Viva Insights, Bing Maps) deployed system-wide by administrators.

No organization-wide apps found in Exchange Online.

2.7. Exchange Connectors

Displays mail routing paths, SMTP inbound/outbound connectors, smart host configurations, and partner TLS enforcement rules.

No Exchange connectors configured.

2.8. Email Clients & PST Environment

Pinpoints email client type utilization profiles, tracking unique user footprints across web apps, desktop suites, and legacy protocols.

No email client telemetry data available.

2.9. SharePoint & OneDrive Environment Telemetry

Synthesizes file quantity metrics, total document site spaces, active item splits, and client data sync interactions.

Metric Property Description	SharePoint Sites (180d)	OneDrive Personal (180d)
Total Scope Count (Sites / Accounts)	0 Sites	0 Accounts

Total Storage Consumed	0.00 Bytes	0.00 Bytes
Total Stored File Count	0 Files	0 Files
Active Files Count (Active %)	0 (0.0%)	0 (0.0%)
Users with Sync Client Active	N/A (SharePoint level)	0 Users (0.0%)
Active OneNote Users	N/A (SharePoint level)	0 Users

2.10. Microsoft Teams Overview

Aggregates real-world interaction data from active communication channels, tracking team names, activity timelines, guest levels, and message history.

No Microsoft Teams activity data was available.

3. Microsoft Intune (Unified Endpoint Management)

Focus: Managing corporate hardware assets, cross-platform endpoint security baselines, device configuration profiles, and mobile application compliance rules.

3.1. Managed Mobile Apps

Identifies enterprise-monitored mobile applications package distributions (such as App iOS/iPadOS, Flipkart) tracked through application management policies.

No mobile apps discovered or permission restricted.

3.2. Managed Devices (Top 10)

Captures enrollment states for managed endpoints distributed across standard enterprise work groups.

No managed devices were discovered or permission restricted.

3.3. Video Conferencing (VC) Devices (Top 10)

Measures corporate meeting room hardware allocations cross-referenced with internal room mailbox accounts.

No Video Conferencing (VC) devices were discovered or matched against room mailboxes.

3.4. Device Configurations

Monitors operating system setup profiles, tracking deployment values for platform kiosk, wireless network, and endpoint security configurations.

No device configuration policies were discovered or permission restricted.

3.5. Mobile Device Compliance Policies

Details compliance baseline rule structures targeting corporate mobile operating systems including Android and iOS.

Android Devices (Top 10)

No Android device compliance policies were discovered or permission restricted.

iOS Devices (Top 10)

No iOS device compliance policies were discovered or permission restricted.

Mobile BYOD Configurations (Top 10)

No Mobile BYOD configurations were discovered or permission restricted.

3.6. Mobile Device Management Policies (Top 10)

Documents automated enrollment server URLs, configuration terms-of-use paths, and compliance action redirects.

No Mobile Device Management (MDM) policies were discovered or permission restricted.

3.7. Detected Apps (Top 10 Discovered)

Logs inventory scans tracking unmanaged or restricted third-party applications operating on managed tenant hardware.

No detected apps were discovered or permission restricted.

3.8. Firewall and Proxy Configurations

Tracks platform configuration profiles governing host hardware firewall states and proxy network interface values.

No Firewall or Proxy configurations discovered in Intune policies.

4. Microsoft Purview & Defender (Compliance, Information Protection & Threat Security)

Focus: Data life preservation boundaries, content classification frameworks, leak prevention controls (DLP), legal discovery workflows, and email hygiene protections.

4.1. Microsoft Purview Sensitivity Labels

Coordinates information classification definitions and encryption shields assigned to protect data assets based on priority rules.

No Purview Sensitivity Labels configured or permission restricted.

4.2. Microsoft Purview Retention Compliance Policies

Manages compliance data lifecycles, applying permanent holds or custom retention rules across mail, site, and group workloads.

No Purview Retention compliance policies discovered or permission restricted.

4.3. Data Loss Prevention (DLP) Policies

Outlines active data protection schemas designed to identify, monitor, and automatically block sensitive data transfers across systems.

No Purview Data Loss Prevention policies discovered.

4.4. Sensitive Information Types

Catalogs built-in and custom regular expression patterns used to detect confidential strings like banking codes, passport numbers, and API keys.

No Sensitive Information Types discovered.

4.5. Mail Security (Exchange)

Details active threat filtering protection licensing bundles (such as Microsoft Defender for Office 365 vs. Exchange Online Protection).

No mail security SKUs detected.

4.6. Exchange Transport Rules

Houses custom mail flow rules designed to govern tenant traffic, manage encryption triggers, enforce domain rejections, and route alerts.

No Exchange Transport Rules discovered.

4.7. Microsoft Purview eDiscovery Cases

Monitors legal lookup spaces, documenting open and closed content searches, hold constraints, and regulatory review timelines.

No eDiscovery cases were discovered or Delegated Authentication was not used.

5. Microsoft Power Platform (Business Applications & Automation)

Focus: Analytics of citizen development environments, low-code process automated pipelines, environment segmentation structures, and custom connector dependency profiles.

5.1. Power Platform & Automate Flows Analytics

Houses all low-code automation insights, summarizing scanned environment boundaries, active cloud/desktop flow counts, custom/premium integration connectors, and complex logic rule sets.

No Power Platform or Power Automate telemetry scan data was available.
